1. Context

Crown Estate Scotland manages property – including buildings, land, coastline and seabed – on behalf of the Scottish people.

We work in a way that:
- Generates prosperity and value for all of Scotland;
- Supports the growth of sustainable business and industry in Scottish seas and on the coast;
- Makes places better for those who live, work and visit there;
- Promotes sustainable ways of producing energy, food, and other products; and
- Creates opportunities for people to use and benefit from the Scottish Crown Estate.

The Scottish Crown Estate Act 2019 requires us to manage the assets in a way that is likely to contribute to the promotion of improvement of economic development, regeneration, social wellbeing and environmental wellbeing. To do this, we need to understand the wider value delivered by the assets and our management activities.

2. Asset summary

Shellfish farming is mainly the production of mussels and Pacific oysters and is one of Scotland's most sustainable industries. As a sector it boosts economy and employment, particularly in remote locations where other job opportunities are scarce.

Shellfish farming operations require a Crown Estate Scotland lease. However, we are not a regulator and have no statutory function in relation to the industry. Planning consent is issued by local authorities and a marine licence is issued from Marine Scotland. We currently lease 270 sites to fish farm operators to grow shellfish in Scottish waters.

Shellfish farming – change in value and value share over time

Map correct as at November 2022. Under the Open Government Licence, we give free access to our open datasets and map which can be found on our Spatial Data Hub which gives access to view and download spatial data, PDF maps for download, and our interactive map.
Five value categories have been identified:

- Economic;
- Social;
- Environmental;
- Climate Change; and
- Regeneration.

Each value category has a set of three or four indicators. The indicators are relevant for all Scottish Crown Estate asset classes and also align with Scotland’s National Performance Framework and the UN Sustainable Development Goals.

**Measures of success**

**Economic**
- Employment – jobs created or safeguarded
- Local economy – local businesses are active in the supply chain and provide local employment
- National interests – benefiting Scotland’s national economy / showing leadership
- Circular economy – increasing efficiency / reducing waste in processes and products

**Social**
- Health – reflects / promotes good health at local or national level
- Skills – stakeholders gain valuable skills
- Community participation – community is an active stakeholder and participant

**Environmental**
- Natural resources – resources used / maintained in a sustainable way
- Biodiversity – biodiversity is protected/strengthened
- Pollution prevention – pollution is decreased / not increased

**Climate change**
- Mitigation – low or zero emissions
- Adaptation – actions increase resilience / reduce risk
- New opportunities – new, low or net zero emissions activities/businesses/products pursued

**Regeneration**
- Assets – positive impacts on associated assets
- People – people are enabled or empowered
- Organisations – activities involve collaboration with other organisations

**Connected assets**

- Seaweed
- Finfish
- Coastal Cables & Pipelines
- Ports & Harbours
- Offshore wind
- Marinas & Moorings

**SHELLFISH FARMING ASSET PROFILE**

- Geographical (G)
- Logistical (L)
- Policy (P)
- Financial (F)
4. Potential for Wider Value

The diagrams below demonstrate the wider value currently generated by the asset class as a whole and indicate where we consider there is potential to deliver increased wider value. This is influenced by a range of factors including the inherent value of the assets, tenant activity, regulator activity and other external factors. For shellfish, key areas identified with potential for increased wider value include:

**Opportunities**
- Co-location of shellfish with seaweed farming offers carbon mitigation and potential offsetting market;
- Co-location of shellfish with offshore wind offers economic opportunities;
- New products from shellfish increase value/demand, particularly in home markets;
- Cost of international seafood with rising transport costs heightens demand for Scottish shellfish; and
- Societal demand for climate friendly low carbon diets.

**Threats**
- Rising sea temperatures make Scottish waters less suitable for some shellfish;
- Invasive non-indigenous species impact on native Scottish shellfish;
- Poor profitability constrains necessary investment to grow industry;
- Increasing biotoxin threats result from climate change; and
- Poor water quality increases health issues for shellfish consumption.

**Key**

This full value potential is indicated by the blue line. The actual average performance of the assets as currently managed is shown by the orange line. The opportunity for delivering enhanced value is the stretch between the orange line and the blue line.

Where potential and actual performance are the same the orange line will hide the blue line beneath it. No weighting has been applied to any indicator.
5. Benefits delivered by Crown Estate Scotland

Our latest Corporate Plan sets out our four roles:

**Investor**
Investing in, for example, property development, as well as building external partnerships and supporting staff.

**Asset Manager**
Careful management of leases and agreements, as well as direct management of forestry and mountain bike trails.

**Co-ordinator**
Supporting other Scottish Crown Estate managers by, for example, coordinating spatial information.

**Enabler**
Empowering others by supporting local plans and projects, providing access to property and helping address barriers to sector growth.

For shellfish, some examples of our activities include:

**Asset Manager**
- Manage lease terms appropriately to generate revenue without overburdening the sector.
- We completed a Root & Branch review of aquaculture leasing in January 2022. The revised terms are being introduced to encourage assets to be managed in a way that maintains and enhances value through the reporting on the use of marine plastics. Reporting to be implemented January 2023.

**Enabler**
- We published a report on alternative markets for farmed Scottish Shellfish and associated requirements for the industry to identify potential opportunities for growth.
- We conducted an interactions project which identified opportunities for improved coexistence with capture fisheries and restorative aquaculture.

The table below presents our assessment of the significance of the benefits that we currently deliver through these four roles. Our Corporate Plan sets out actions against these four roles. Over time, we expect the significance of benefits to increase as considerations regarding wider value are embedded into decision making.
