Reporting period	January 2023-January 2024
------------------	---------------------------

Confirmation of records for plastics used on leased seabed areas (from the sea surface to the seabed)

I/we confirm that;

[REDACTED]

has maintained appropriate records for the above reporting period that reflect the procurement and disposal of plastics used on the listed seabed lease location(s) as part of measures employed to minimise the risk of losses to the marine environment and responsible disposal of plastic waste.

These records support the changes to procurements and disposal means reported below.

Relevant records of plastic procurements, stock and means of disposal employed for waste and redundant items used on leased sites will be retained for a minimum period of 5 years and will be made available to CES representatives on request during site visits.

1. Management of plastic in this reporting period

- (i) The comparison of records for the current and previous reporting period indicates that aggregated procurements of **multi-use plastics** deployed on leased sea-sites has increased/decreased/remained the same (delete as appropriate).

This increase/decrease (please delete as appropriate) was due primarily to the following reasons (refer to *Guidance for completing the Environmental Management of Plastics: Aquaculture Leaseholders Report*).

Section left Blank - First year of submission.

- (ii) The comparison of records for the current and previous reporting period indicates that our aggregated procurements of **short term/ single-use plastics** used on leased sea-sites has increased/decreased/remained the same (delete as appropriate).

This increase/decrease (please delete as appropriate) was due primarily to the following reasons: (refer to *Guidance for completing the Environmental Management of Plastics: Aquaculture Leaseholders Report*).

Section left blank – First year of submission.

- (iii) The comparison of records for the current and previous reporting periods indicates that **changes to the proportion of waste plastic from leased sea-sites disposed of by recycling, re-use or to landfill** are as set out in Table 1 below.

Table 1: Aggregated changes to disposal methods across waste and redundant plastic used on lease sites in this reporting period.

(Tick as appropriate or enter 'n/a' if the disposal method is not used by your company for waste plastics disposal)

Disposal method	Change from last reporting period	Single use (v)	Multi use (v)
Recycling	Increase	<input type="checkbox"/>	<input type="checkbox"/>
	Decrease	<input type="checkbox"/>	<input type="checkbox"/>
	Stay the same	<input type="checkbox"/>	<input type="checkbox"/>
Re-use/re-purpose	Increase	<input type="checkbox"/>	<input type="checkbox"/>
	Decrease	<input type="checkbox"/>	<input type="checkbox"/>
	Stay the same	<input type="checkbox"/>	<input type="checkbox"/>
Licensed Landfill	Increase	<input type="checkbox"/>	<input type="checkbox"/>
	Decrease	<input type="checkbox"/>	<input type="checkbox"/>
	Stay the same	<input type="checkbox"/>	<input type="checkbox"/>
Licensed Incineration-licensed (on-site is illegal)	Increase	<input type="checkbox"/>	<input type="checkbox"/>
	Decrease	<input type="checkbox"/>	<input type="checkbox"/>
	Stay the same	<input type="checkbox"/>	<input type="checkbox"/>
Other means of disposal. <i>Please insert details</i>	Increase	<input type="checkbox"/>	<input type="checkbox"/>
	Decrease	<input type="checkbox"/>	<input type="checkbox"/>
	Stay the same	<input type="checkbox"/>	<input type="checkbox"/>

The **increases and/or decreases** in different disposal means listed in Table 1 are due primarily to the following reasons: (refer to [Guidance for completing the Management of Plastics: Aquaculture Leaseholders Report](#)).

Section left blank – first year of submission.

(Tenants may wish to comment on relative proportions of the different waste plastic disposal methods from their sea-sites, particularly where high levels of recycling are consistently achieved).

2. Improvements in management of plastics on leased sea-sites

Please provide any information you wish to share on measures undertaken over the reporting period regarding improvements in the management of plastics.

All leases are compliant with the industry's code of good practice which stipulates in chapter 4.2 'All waste materials such as feed bags, lengths of redundant rope, etc. should be carefully collected from pen installations and brought back to shore where they should be properly segregated, stored, recycled or disposed of by an approved means within a defined timescale.'

All leases are compliant with Scottish Government's technical containment standard for Scottish finfish aquaculture. The Standard covers design, construction, materials, manufacture, installation, maintenance and size of equipment to help prevent escapes of finfish.

All leases are aligned with the sector's sustainability charter regarding the following actions:

'Pursue ways to divert potential waste, be it organic matter from freshwater hatcheries or obsolete farm infrastructure, into valuable by-products'

'Take every step possible to avoid marine debris from our farms and recover any items promptly regardless of their origin'

We regularly review and hone our own practices to reduce the potential for any items to become loose or break away, in good weather or in bad.

This includes:

- Checking the integrity of all farm infrastructure daily with regular underwater inspections throughout each crop
- Monitoring the shipping forecast for early notice of severe weather
- Carrying out a risk assessment in advance of severe weather to identify any additional measures necessary such as re-locating equipment or mooring workboats in more sheltered areas
- Inspecting farm infrastructure before and immediately after the weather event, including the use of underwater cameras and/or divers, to check for damaged, dislodged or lost items.

We also train every new member of every farm team in knot-tying during their first week, everything from how to tie a knot securely to how many ropes are required to adequately secure an item, minimising the likelihood of ropes breaking free.

In addition sites which held ASC leases are compliant with conditions 4.5.1, 'Presence and evidence of a functioning policy for proper and responsible treatment of non-biological waste from production (e.g. disposal and recycling)' and 4.5.2, 'Evidence that non-biological waste (including net pens) from grow-out site is either disposed of properly or recycled'

3. Opportunities and challenges

Please comment on any opportunities, challenges and mitigating circumstances relevant to management of plastic used on leased sea-sites during the reporting period which you would like to share.

All leases must comply with Scottish Government's technical containment standard for Scottish finfish aquaculture which prescribes materials allowed for farm infrastructure, this is prescriptive regulation that does not enable alternative materials to be used.

Waste disposal methods for certain plastic materials that we are not able to use an alternative material for do not have commercial disposal routes available in the UK. To dispose of these materials in different countries would impact another element of our company's sustainability i.e., our greenhouse gas emissions. Our company has a dedicated sustainability team who assess and ensure our company continually improves its sustainability and achieves its company-level targets.

4. Any other relevant information

Please comment on any other factors you wish CES to be aware of regarding plastic use or waste management on your leased sites.

Cleaning our local shores of marine and mixed waste is something we've been doing informally for many years now. In 2018, our Orkney team signed up to the Marine Conservation Society (MCS) Great British Beach Clean. In 2023, our sixth year of participation, we recorded 9 registered beach cleans across three farming regions – Argyll and Bute, Orkney and Shetland - collecting and removing all manner of waste items.

All leases are participants in the Scottish salmon trade body's marine debris initiative, further. Information can be found here: <https://www.salmonscotland.co.uk/initiatives/marine-debris> Every time a report is made of marine debris regardless of whether it is aquaculture related we will make every effort to support collection and disposal of this.
