Coastal Cables & Pipelines Asset Profile

1. Context

Crown Estate Scotland manages property – including buildings, land, coastline and seabed – on behalf of the Scottish people.

We work in a way that:

- Generates prosperity and value for all of Scotland;
- Supports the growth of sustainable business and industry in Scottish seas and on the coast;
- Makes places better for those who live, work and visit there;
- Promotes sustainable ways of producing energy, food, and other products; and
- Creates opportunities for people to use and benefit from the Scottish Crown Estate.

The Scottish Crown Estate Act 2019 requires us to manage the assets in a way that is likely to contribute to the promotion of improvement of economic development, regeneration, social wellbeing and environmental wellbeing. To do this, we need to understand the wider value delivered by the assets and our management activities.

Asset profiles have been developed for the Estate's 21 asset classes. The profiles include information on financial returns, the public benefits delivered through our management activities, and our view of the opportunities for wider value creation.

The analysis has been undertaken in-house, using qualitative assessment and expert judgment.

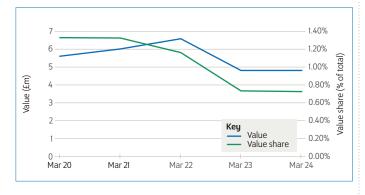

2. Asset summary

Coastal agreements for cables and pipes are mostly related to public utilities such as electricity distribution and water & sewerage infrastructure. Scotland's public drinking water and sewerage services are provided by Scottish Water. Crown Estate Scotland and Scottish Water have a framework agreement in place that sets out how contracts for non-commercial infrastructure are handled. Scottish and Southern Energy provide subsea electricity cables to island communities and Crown Estate Scotland grants agreements for these seabed crossings.

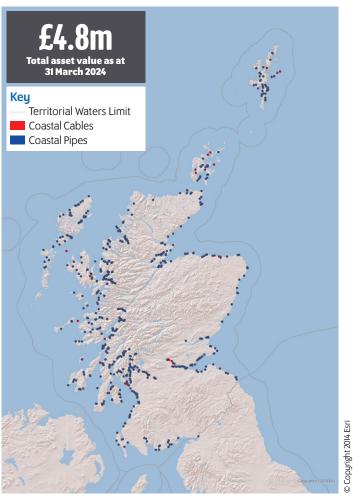

Asset and financial information

Asset information	Value
No of agreements	792
Value (March 2024)	£4.8m
Value share (% of total Estate value, March 2024)	0.72

Coastal Cables & Pipelines – change in value and value share over time

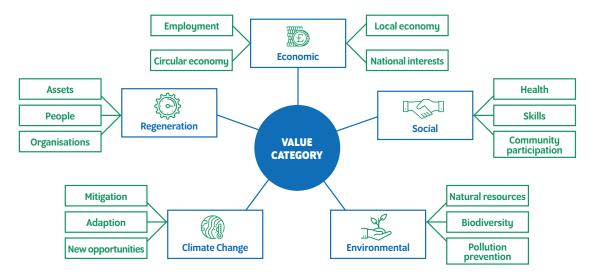

Coastal cables & pipelines asset map

Map correct as at September 2024. Under the Open Government Licence, we give free access to our open datasets and map which can be found on our <u>Spatial Data Hub</u> which gives access to view and download spatial data, PDF maps for download, and our <u>interactive map</u>.

3. Understanding Value

Five value categories have been identified:

- · Economic;
- Social;
- Environmental;
- · Climate Change; and
- · Regeneration.

Each value category has a set of three or four indicators. The indicators are relevant for all Scottish Crown Estate asset classes and also align with Scotland's National Performance Framework and the UN Sustainable Development Goals.

Measures of success

Economic

Employment – jobs created or safeguarded

Local economy – local businesses are active in the supply chain and provide local employment

National interests – benefiting Scotland's national economy / showing leadership

Circular economy – increasing efficiency / reducing waste in processes and products

Social

Health – reflects / promotes good health at local or national level **Skills** – stakeholders gain valuable skills

Community participation – community is an active stakeholder and participant

Environmental

Natural resources – resources used / maintained in a sustainable way Biodiversity – biodiversity is protected/strengthened Pollution prevention – pollution is decreased / not increased

Climate change

Mitigation – low or zero emissions

Adaptation – actions increase resilience / reduce risk

New opportunities – new, low or Net Zero emissions activities/ businesses/products pursued

Regeneration

Assets – positive impacts on associated assets

People – people are enabled or empowered

Organisations – activities involve collaboration with other organisations

Next steps

The Value Project started in 2019 as a direct response to this need to define the wider value of CES's activities.

In 2023, with the help of Savills Earth we completed development of our new Value Reporting Framework (VRF). This framework will support CES to shape data gathering to inform non-financial metrics and will help to inform our future decision-making, reporting, and monitoring processes.

The VRF seeks to measure the value created through all of CES's activities, producing quantitative and qualitative data for investment case decision making and annual reporting.

To achieve this a systematic process for measuring value was developed, in which our five wider value categories – climate change, social, economic, environmental and regeneration – were individually assigned a specific value indicator, with each indicator directly tied to its own value creation metric.

We have now incorporated indicators relating to employment, investment, and social cost of carbon into our annual reporting and further indicators will be added going forwards.

4. Potential for Wider Value

The diagrams below demonstrate the wider value currently generated by the asset class as a whole and indicate where we consider there is potential to deliver increased wider value. This is influenced by a range of factors including the inherent value of the assets, tenant activity, regulator activity and other external factors. For coastal cables and pipelines, key areas identified with potential for increased wider value include:

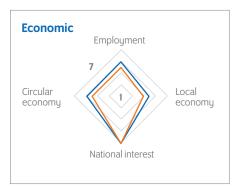

- Environment upgrading of infrastructure can lead to improved environmental performance.
- Climate change upgrading of infrastructure can reduce risk of climate change effects and present opportunities to adopt a low carbon approach.

Opportunities

 The upgrading of cables and pipes can lead to improved environmental performance and robust utility supply.

Threats

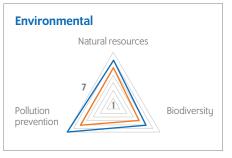

- Ageing infrastructure requiring significant expenditure to replace or upgrade;
- Risk to service to customers arising from failure of a critical asset or assets;
- Risk arising from failure of key strategic water mains resulting in loss of service and significant water damage to surrounding properties and/or infrastructure; and
- Risk of failure to deal with the impact of extreme and unpredictable weather events on its assets, infrastructure and services.

This full value potential is indicated by the blue line. The actual average performance of the assets as currently managed is shown by the orange line. The opportunity for delivering enhanced value is the stretch between the orange line and the blue line.

Where potential and actual performance are the same the orange line will hide the blue line beneath it. No weighting has been applied to any indicator.

5. Benefits delivered by Crown Estate Scotland

Our 2020-2026 Corporate Plan sets out our four roles:

Investor

Investing in, for example, property development, as well as building external partnerships and supporting staff.

Asset Manager

Careful management of leases and agreements, as well as direct management of forestry.

Co-ordinator

Supporting other Scottish Crown Estate managers by, for example, coordinating spatial information.

Enabler

Empowering others by supporting local plans and projects, providing access to property and helping address barriers to sector growth.

For Coastal Cables & Pipelines some examples of our activities include:

Asset manager

Managing potential interactions with other managed assets.

Key

Inactive
Low
Medium
High

The table below presents our assessment of the significance of the benefits that we currently deliver through these four roles. Our Corporate Plan sets out actions against these four roles. Over time, we expect the significance of benefits to increase as considerations regarding wider value are embedded into decision making.

CABLES & PIPELINES – COASTAL	Investor	Asset manager	Enabler	Coordinator
